Overview

The OECD continues to support G20 priorities by advancing domestic and international tax priorities that foster stability and prosperity. Its tax policy and administration work strengthens economic resilience, supports innovation and investment, and ensures a strong foundation for fiscal sustainability and growth.

Building on steady progress made in recent years, the OECD continues to deliver concrete outcomes across its core workstreams, such as ongoing support for the Base Erosion and Profit Shifting (BEPS) Package and the implementation of the Global Minimum Tax, including the Side-by-Side package agreed in January 2026. It remains committed to enhancing tax transparency and tax certainty, and keeping core international standards fit for purpose, such as the *OECD Model Tax Convention* and the *OECD Transfer Pricing Guidelines*. The OECD work is also strengthening tax policy tools and supporting countries – including developing economies – in building modern, effective, and growth-oriented tax systems. These efforts directly support countries' ability to exercise tax sovereignty, mobilise domestic resources, strengthen business dynamism and investment, and expand equality of opportunity.

A strong and stable international tax environment enhances domestic tax policy decision making

The G20 has consistently underscored that a coherent and predictable international tax system is key to encouraging cross-border investment and maintaining a level playing field among jurisdictions. The OECD's work supports this objective by fostering collaboration to reduce uncertainty, prevent double taxation, protect tax bases, and reinforce investor confidence – all of which strengthen foundations for global productivity improvements and long-term growth. The ten-year stocktake of BEPS implementation prepared for the G20 in October 2025 illustrates the substantial progress made in curbing base erosion and profit shifting including harmful tax practices, thereby stabilising revenue bases across both developed and developing countries.¹

A key area of the OECD's contributions to global tax reform continues to be supporting the implementation of the BEPS Package as well as the Global Minimum Tax framework, including the Side-by-Side package. Significant progress continues on further simplifying the rules, including through permanent safe harbours, streamlining related administrative and compliance processes, providing guidance, and keeping the rules consistent across implementing jurisdictions. The success in reaching consensus on changes to the Global Minimum Tax framework has also increased countries' interest in resuming a dialogue on the tax challenges related to the digitalisation of the economy. And the global reach of the OECD/G20 Inclusive Framework on BEPS (Inclusive Framework) platform continues to expand, with Guatemala recently joining as its 148th member.²

Enhanced transparency to protect revenue and support public investment

In addition to stability and predictability, tax transparency remains another central element of the OECD's efforts to strengthen the integrity of the global tax system and protect countries' tax bases. Major advances in the OECD's transparency initiatives include the recent development of a new voluntary international framework for the automatic exchange of readily available information on real estate and continued focus on tackling emerging risks, including those related to crypto-assets.

These initiatives are based on the foundational tax transparency standards and the Automatic Exchange of Information (AEOI) system, the implementation of which is supported by the Global Forum on Transparency and Exchange of Information for Tax Purposes. In conjunction with having a stable system based on efficient administration and balanced policy design, improvements in transparency help reduce illicit financial flows, protect domestic revenue bases and enable governments to sustain investment in infrastructure, human capital, and social welfare systems. Such investment is essential to enhancing productivity and balanced long-term growth.

Tax policy for stronger growth

Recent work by the OECD, including through the Inclusive Framework, has placed renewed emphasis on identifying opportunities to strengthen growth through tax policy reform, considering the intersection of tax with decisions to work, hire, save and invest, and with distributional outcomes. These themes are increasingly important to G20 economies as they navigate complex structural changes arising from demography and economic transformation, including digitalisation. OECD analyses highlight how well-designed tax systems can steer economic behaviour towards productive investment, support labour force participation, and improve the efficiency of revenue collection.

The Inclusive Framework workstreams on tax and mobility, and the interaction between tax policy, inequality and growth, and the OECD Forum on Tax Administration's work on tax administration modernisation help to inform domestic policymakers' choices in designing investment-friendly corporate tax rules, adapting to new global labour mobility patterns, harnessing digital transformation to improve service, and simplify and strengthen compliance. The OECD equips jurisdictions with tax policy and tax administration tools that are essential for transitions underway globally, creating conditions conducive to competitiveness and growth for the coming decades.

Supporting developing economies through capacity building

Domestic resource mobilisation remains one of the most powerful prerequisites for countries' long-term economic development, and effective taxation can reduce the need to rely on foreign aid. The OECD is strongly committed to strengthening tax capacity in developing economies through customised support for tax policy design, a range of targeted technical assistance initiatives, and regional and global partnerships. This includes supporting the participation of developing countries in global tax co-operation frameworks, such as the Inclusive Framework.

These efforts help countries modernise their tax systems, improve compliance, and secure the revenues needed to invest in infrastructure, education, healthcare, and extreme weather resilience – all prerequisites for sustained growth. The participation of developing economies in rule-shaping processes also ensures that global reforms are more inclusive and that tax co-operation supports the ability of these countries to pursue sustainable growth strategies.

Next steps for growth-oriented taxation

The OECD remains committed to working closely with G20 members to further advance efficient tax systems that support economic resilience, encourage investment, and foster growth. Priority areas for this year include:

- **Supporting global minimum tax implementation**, including simplification, guidance, and further co-ordination across jurisdictions.
- **Fostering constructive dialogue** among jurisdictions on tax issues related to the digitalised economy that supports a certain and stable international tax environment.
- **Deepening tax transparency initiatives**, with a focus on emerging risks and enhanced co-operation frameworks.
- **Advancing on the tax certainty agenda**, with a focus on rule simplification, improved dispute prevention, and targeted and effective dispute resolution.
- **Reducing tax obstacles from increasingly frequent cross-border work fact patterns.**
- **Strengthening tax policy design** as countries balance rising fiscal pressures with long-term innovation and investment needs.
- **Expanding support for developing economies to** strengthen their capacities to ensure that global and domestic reforms can bolster domestic resource mobilisation and economic growth potential.
- **Modernising tax administration**, including digital transformation to reduce compliance costs, improve performance, reduce tax gaps across tax types, and support formalisation and productivity.

The OECD continues to update and upgrade its capacity to deliver on G20 priorities as it confronts emerging global challenges and works towards tax policy and administration that supports strong, inclusive, and dynamic economies.

1 Support for G20 initiatives

The G20 has consistently championed deeper international collaboration on tax matters through efforts aimed at strengthening transparency, reducing barriers to cross-border trade and investment, fostering sustainable growth, safeguarding countries' revenue bases, and responding to development priorities. For more than 15 years, the OECD has served as an effective platform for collaboration in support of these goals by delivering rigorous, evidence-based policy analysis and by facilitating international co-operation on initiatives endorsed by successive G20 presidencies.

Over this period, the G20 has endorsed several major global tax initiatives, from the drive to enhance tax transparency and dismantle bank secrecy for tax purposes, to the BEPS Project targeting corporate tax avoidance. More recently, the G20 supported negotiations to reach agreement under the Global Minimum Tax framework to bring about greater stability, fairness, and certainty to the international tax system.

The United States' G20 Presidency in 2026 begins a new rotation of presidencies and has placed a prominent focus on promoting global growth. Collaboration in furtherance of growth has always been at the heart of the OECD tax agenda through its long-standing work programmes based on data collection, research, and analysis to support coherent economic policymaking. The OECD also continues to safeguard and maintain core international tax standards to promote certainty and stability in the international tax system.

2 Contribution of core OECD tax workstreams to fostering growth

Ongoing support for the BEPS Package and the Global Minimum Tax framework

The OECD/G20 Inclusive Framework's work on BEPS and the Global Minimum Tax has been essential in reducing uncertainty for cross-border trade and investment, safeguarding corporate tax bases for governments, and reducing harmful tax practices. It remains a core priority of the OECD tax programme that helps to align financial incentives and tax systems with growth priorities.

Continuing the BEPS initiative journey

As referenced in the 2025 OECD stocktake report on the BEPS Initiative,³ the OECD is advancing the international agenda to tackle BEPS. Ten years after the launch of the original 15 BEPS Actions, the project has fundamentally reshaped the international tax framework by driving greater corporate transparency, helping stabilise global corporate tax rates, and reducing the misalignment between profits and real economic activity. The OECD continues to build an inclusive platform that helps developing countries participate in and benefit from BEPS-related reforms. Future work on BEPS implementation remains a priority.

A technical update on continued progress regarding implementation of the BEPS minimum standards is detailed in Annex A.

The Global Minimum Tax

Policy goals

The Global Minimum Tax rules (the Global Anti-Base Erosion Model rules or GloBE rules) were adopted by the Inclusive Framework in November 2021 as an outgrowth of the work to prevent BEPS, inspired in large part by the US initiative to establish its own minimum tax framework in its landmark 2017 tax reform. The Inclusive Framework minimum tax framework aims to mitigate investment distortions and protect domestic tax bases, while improving certainty and stability for large cross-border businesses, by ensuring that multinationals pay a minimum level of tax on their operations in each jurisdiction.

³ OECD (2025), *A Decade of the BEPS Initiative: An Inclusive Framework Stocktake Report to G20 Finance Ministers and Central Bank Governors*, OECD/G20 Base Erosion and Profit Shifting Project, OECD Publishing, Paris, <https://doi.org/10.1787/32096fd3-en>.

An important feature of the Global Minimum Tax is its design, developed by the Inclusive Framework and championed by many developing countries, to exempt a routine return on tangible investment and employment from the application of the tax in order to protect real investment and jobs. This ensures that the impact on the cost of capital for substantive investments will be minimal. This careful design ensures that the Global Minimum Tax will not place any additional tax on Multinational Enterprises' (MNEs) routine return on tangible investment, allowing them to earn a breakeven return without being subject to top-up tax. This should support the levying of top-up tax without negative growth or employment impacts globally. Equally, the Global Minimum Tax through its use of deferred tax accounting is designed not to apply where tax incentives, such as immediate expensing, only result in timing mismatches. Finally, with the new rules on substance-based tax incentives as part of the Side-by-Side package, the treatment of refundable and non-refundable tax incentives has been further aligned, addressing criticism that had been raised by stakeholders.

In addition, the Global Minimum Tax can support a level playing field across domestic firms. Evidence shows that large, internationally-operating taxpayers often have lower effective tax rates than small firms, which may be due to their ability to engage in BEPS activity. These advantages can negatively impact competition and discourage new entrants to markets, leading to slowdowns in productivity growth and innovation, and worsening outcomes for growth and for consumers. OECD analysis suggests that the Global Minimum Tax is expected to reduce shifted profit by up to half.⁴ By reducing BEPS and ensuring a minimum tax rate for MNEs, the Global Minimum Tax mitigates investment distortions and promotes innovation-enhancing competition.

To date, more than 65 jurisdictions have already implemented or are in the process of implementing the GloBE rules or a Qualified Domestic Minimum Top-up Tax (QDMTT).

Recent developments

The Side-by-Side package,⁵ released on 5 January 2026, marks a significant technical and political achievement for the Inclusive Framework following months of complex negotiations. Its adoption by consensus underscores the strong and continuing commitment of Inclusive Framework members to international tax co-operation.

Achieving consensus required a balanced package that addressed members' concerns while protecting the core policy objectives of the Global Minimum Tax. The final Side-by-Side package reflects this balance through a combination of simplifications, closer alignment of substance-based incentives with genuine economic activity, targeted accommodations for jurisdictions operating comparable minimum-tax systems, and reinforced commitments to ongoing risk monitoring.

Substantively, the package introduces important simplifications, including a new Simplified Effective Tax Rate (ETR) Safe Harbour, an extension of the Transitional Country-by-Country Reporting (CbCR) Safe Harbour through 2027, and a work programme on additional simplifications. The Side-by-Side system further acknowledges that some jurisdictions may have implemented minimum-tax regimes with similar objectives and policy impact and provides a structured approach to accommodating such systems. Crucially, the agreement reaffirms the primacy of QDMTTs, which continue to apply to all MNE Groups without exception, ensuring that local tax bases – particularly in developing countries – remain protected.

⁴ Hugger, F. et al. (2024), "The Global Minimum Tax and the taxation of MNE profit", *OECD Taxation Working Papers*, No. 68, OECD Publishing, Paris, <https://doi.org/10.1787/9a815d6b-en>.

⁵ OECD (2026), *Tax Challenges Arising from the Digitalisation of the Economy – Global Anti-Base Erosion Model Rules (Pillar Two), Side-by-Side Package: Inclusive Framework on BEPS*, OECD, <https://www.oecd.org/content/dam/oecd/en/topics/policy-sub-issues/global-minimum-tax/side-by-side-package.pdf>.

Taken together, these elements preserve the core policy goals of the Global Minimum Tax: reducing incentives for uneconomic profit shifting, raising the floor on corporate income taxation of large multinational enterprises, and minimising distortions in global investment decisions. The agreement also includes a commitment to address any future BEPS risks or level playing field concerns, informed by a comprehensive stocktake to be completed in 2029. This ensures that the Inclusive Framework can monitor unintended effects and respond collectively if future adjustments are needed.

Planned work

A robust programme of work will provide further simplifications and guidance to tax administrations and in-scope taxpayers. Together with the release of the Side-by-Side package, the Central Record for purposes of the Global Minimum Tax was updated in January 2026 and now includes 44 Qualified Income Inclusion Rule regimes and 46 Qualified Domestic Minimum Top-up Tax regimes.⁶ In addition, the United States' regime has been added to the Central Record as a jurisdiction with a Qualified Side-by-Side Regime following the process by which the United States tax regime was assessed by the Inclusive Framework against the Side-by-Side criteria.

Furthermore, as part of the peer review process on the Global Minimum Tax, new implementing jurisdictions can self-certify their legislation to be qualified for a transitional period under the transitional qualification mechanism. In addition, the Inclusive Framework will develop the terms of reference and assessment methodology for the full legislative review to assess whether domestic legislation provide consistent outcomes with the GloBE rules and commence these reviews in the second half of 2026.

The Inclusive Framework is currently developing an update to the GloBE Information Return (GIR) and the GIR XML schema to incorporate the Side-by-Side package. To facilitate central filing of the GIR and reduce the compliance burden for MNE Groups, the OECD Secretariat is also working to support further signings of the Multilateral Competent Authority Agreement on the Exchange of GloBE Information (GIR MCAA)⁷ and the activation of a wide network of exchange relationships in time for first exchanges in December 2026.

In addition, further Administrative Guidance is currently being developed by the Inclusive Framework on a routine profits safe harbour and a de minimis simplification to take the place of those tests in the Transitional CbCR Safe Harbour. There will also be simplifications for investment entities and minority owned constituent entities. The Inclusive Framework will also work on integrity measures which would be applicable not only in the context of the Simplified ETR Safe Harbour but also more generally, as well as guidance on conditional taxes and related benefits. Furthermore, additional guidance on industry-specific issues such as real estate investment vehicles, simplifications for investment entities, guidance on the substance-based income exclusion for mobile assets, and guidance on specific issues raised by hyper-inflationary currencies, is under discussion.

The OECD Forum on Tax Administration (FTA) is contributing to the support offered to implementing jurisdictions by working on improving co-ordination and consistency in the administration of the Global Minimum Tax. Tax administrations from around the world are sharing their experiences and learnings through a series of virtual and in-person workshops. The input obtained during these workshops is feeding

⁶ <https://www.oecd.org/en/topics/sub-issues/global-minimum-tax/central-record-of-legislation-with-transitional-qualified-status.html>.

⁷ The GIR MCAA currently includes 28 signatories. <https://www.oecd.org/content/dam/oecd/en/topics/policy-issues/tax-transparency-and-international-co-operation/gir-mcaa-signatories.pdf>.

into a *Global Minimum Tax Implementation Toolkit*⁸ that provides guidance to tax administrations on establishing efficient processes that minimise administrative and compliance burdens. The toolkit draws on the experiences of those jurisdictions further advanced in the implementation journey, includes input from the business and wider stakeholder community, and seeks to identify best practices that could support consistent and efficient administration of the Global Minimum Tax.

A constructive dialogue on taxation of the digitalised economy

As expressed in the April 2025 Inclusive Framework Plenary outcome statement,⁹ members have a strong interest to resume discussions on tax challenges arising from the digitalisation of the economy following conclusion of negotiations on the Side-by-Side agreement. A similar intent was noted in the 2025 G20 Leaders' summit declaration.¹⁰

Members of the Steering Group of the Inclusive Framework have expressed a common desire to return to that conversation and acknowledged the importance of addressing the issues and challenges in a multilateral setting in order to avoid fragmentation and harmful unilateral approaches.

Over the coming months, the OECD Secretariat will support the Inclusive Framework as they review the work done to date, seek feedback on lessons learned, and explore how country priorities and ambitions have evolved, in order to chart the course for future discussions.

3 Creating an evidence base to inform reforms

By generating robust data, improving the design and evaluation of tax incentives, analysing how tax systems influence business dynamism and investment decisions, and helping countries adapt their tax bases to structural challenges such as ageing and informality, the OECD provides policymakers with evidence-based tools that foster more efficient investment, stronger innovation, and sustainable, inclusive economic growth.

The OECD delivers evidence-based tax policy design analysis to identify pathways towards stronger, more sustainable economic growth. This tax policy work creates and uses data, research, and country experience to help governments understand how different tax instruments influence incentives to work, invest, innovate, and allocate resources efficiently. By analysing the effectiveness and efficiency of alternative tax structures, the OECD provides guidance that helps countries strike a better balance between raising necessary revenues and fostering inclusive, long-term growth, including through encouraging innovation and improving productivity.

Tax policy, inequality and growth

The OECD/G20 Inclusive Framework agreed in April 2025 to take forward work on the interlinkages between tax policy, inequality and economic growth, responding to encouragement under the Brazilian G20 presidency to take up work on these issues. The work will follow a phased, evidence-based approach beginning with a diagnostic phase. The project is designed to support jurisdictions in exercising their sovereign power to influence distributional outcomes and support growth through their tax systems, drawing on analytical work, country experiences, and international co-operation to build a robust evidence base for future policy discussions.

The emerging work highlights three interrelated areas where tax policy can support shared and equitable growth:

- First, work on business dynamism underscores the importance of tax design in encouraging firm entry, entrepreneurship and innovation, particularly in the context of evidence of declining dynamism across many economies. New and young firms play a critical role in productivity growth, job creation and the diffusion of new technologies, and tax policy can influence both the incentives and the barriers they face.
- Second, work on capital taxation points to the benefits of greater coherence in tax systems: reducing evasion, avoidance and mismatches can support a broad-based approach that limits distortions and strengthens fairness and efficiency.

- Third, work on domestic resource mobilisation emphasises the importance of strengthening tax capacity and revenue systems so that governments, especially in developing countries, can finance growth-enhancing investments, e.g. in infrastructure and education, and pursue distributional objectives.

At its current stage, the tax policy, inequality, and economic growth project is focused on gathering evidence from Inclusive Framework members on their priorities, challenges and policy experiences, and on strengthening the analytical and quantitative evidence base. This diagnostic phase will help identify key gaps and opportunities, providing a foundation for the Inclusive Framework to consider any next steps, including further analytical work, the development of best practices, and, where appropriate, continued international co-operation.

Global mobility of workers

Digitalisation and globalisation have led to changes in how individuals and businesses work, with increased cross-border movement of individuals and the ability to use technology to work across borders. These changes in global mobility of workers encompass short-term remote working and business travel, frequent cross-border commuting, expatriation and secondments, and “digital nomads”. Drivers of changes in worker mobility have been driven by shifts in labour-market practices after the COVID-19 pandemic as well as changes in technology, with an increasing number of jobs now able to be done remotely. Changes in employee demands have also played a role and require businesses to expand working practices in order to attract talent and remain competitive.

Members of the Inclusive Framework recognise that these changes may present both challenges (such as uncertainty and compliance frictions) and opportunities (such as greater access to a global talent pool and greater access to employment opportunities).

In April 2025, the Inclusive Framework embarked on a project to evaluate the tax challenges associated with the global mobility of workers, first to gather the evidence on the scale and impact of these changes, as well as to understand the range of tax issues that are present for individuals, businesses and governments. Over the course of the last year, evidence has been gathered from tax policy and administration experts in government (leveraging the extensive experience of members in the Inclusive Framework), from the available research and literature, as well as through a public consultation¹¹ that brought together extensive responses from businesses and academics. Interest in this project has been high, and different perspectives and experiences have been brought forward from all regions of the world and a range of different types of economies.

A significant number of questions have been raised by both tax authorities and taxpayers about the application of elements of the current domestic law, treaty and tax administration frameworks to global mobility fact patterns, across corporate income tax and personal income tax. Some of these issues have been addressed through pragmatic guidance contained in the 2025 update to the *OECD Model Tax Convention*,¹² with taxpayers requesting that more work be taken forward. The types of questions raised include other kinds of permanent establishment cases, transfer pricing and profit attribution, questions about corporate and individual residence, administration and dispute resolution, and interest in considering the issues associated with “digital nomads”.

¹¹ [Global Mobility of Individuals](#).

¹² OECD (2025), *The 2025 Update to the OECD Model Tax Convention*, OECD Publishing, Paris, <https://doi.org/10.1787/5798080f-en>.

Over the coming months, the Inclusive Framework will evaluate these questions and explore areas where greater international co-ordination or knowledge sharing is needed. In doing so, attention will continue to be paid to the need to bring about greater certainty, to consider opportunities for simplification, and to streamline compliance for both taxpayers and tax administrations. At the same time, the Inclusive Framework recognises that the relevance of global mobility issues may differ for countries or particular cross-border regions, and the issues may not present themselves in the same manner in every economy. Any work taken forward on this topic will, where appropriate, consider the development of different templates, models or guidance that responds to the challenges, opportunities and priorities as and where they arise.

Tax policy design and data

Statistical publications and related analysis, such as *Revenue Statistics*, form a core part of the OECD's tax work to equip policymakers with evidence-based data. A number of upcoming projects are in the pipeline and updated documents have been released since the last report to the G20 Finance Ministers in October 2025.

The OECD's work on tax incentives continues to provide evidence to strengthen the design, evaluation and use of incentives to support investment, innovation and growth while safeguarding fiscal sustainability. This includes the development of an OECD practical guide for policymakers on the full lifecycle of tax incentives – from conception and design to monitoring and evaluation – highlighting the importance of clear policy objectives, robust ex-ante assessment, and strong governance frameworks. This analytical work is complemented by the OECD Investment Tax Incentives Database¹³ and country-focused analysis to support more efficient, targeted and transparent use of incentives. Ongoing work also examines the use and cost of research and development tax incentives that can address market failures related to knowledge spillovers and support innovation-led growth.

OECD work on corporate taxation and business dynamism examines how tax policy shapes firm entry, growth and exit. In the context of declining dynamism across many economies, a forthcoming policy brief highlights the importance of tax design in influencing entrepreneurship, innovation and economic growth. Our ongoing analysis explores how key features of the tax system affect young and small firms, helping to identify policy options that support dynamism while maintaining efficiency and revenue sustainability.

OECD work on tax and investment combines analytical research with structured engagement with the business community to better understand how tax policy affects investment decisions in practice. Our dialogue with businesses highlights the importance of the broader tax system – including non-corporate income taxes (CIT), tax certainty, and administrative complexity, in conjunction with work on CIT design and tax incentives. This engagement is complemented by empirical work on tax and investment, including recent studies providing evidence on how different elements of tax systems influence investment behaviour across firms and sectors. Together, this work supports evidence-based policy advice to promote sustainable and inclusive growth.

The effects of population ageing on countries' tax base and spending levels are potentially large. A recent OECD analysis gauges the impact of ageing on revenue raised, for OECD countries, in a scenario where current tax levels and mixes apply to the population age structure of the middle of the 21st century. The downward pressure on revenue from population ageing is shown to be strong, although with significant

¹³ OECD (2025), "OECD Investment Tax Incentives Database 2024 update: Corporate income tax incentives in emerging and developing economies", *OECD Business and Finance Policy Papers*, No. 79, OECD, Paris Cedex 16, <https://doi.org/10.1787/b0de19dc-en>

differences across countries, illustrating the need to anticipate by adapting tax mixes and considering spending priorities.

In a range of lower- and middle-income country projects, analysis by the OECD is undertaken at the country's tax system level to identify opportunities for reform to strengthen revenue-raising capacity while ensuring that taxation supports growth and that growth also translates into a stronger revenue potential. While the set of reform options is strongly contingent on countries' specific circumstances, common themes include challenges related to the informal economy and the widespread use of tax expenditures that compromise revenue raising capacity while their effectiveness is frequently uncertain.

Informality includes both people engaged in basic, small-scale activities with little ability to pay taxes and higher-income individuals and businesses operating outside the formal system. Because this group is so diverse, it is important to design tax systems that do not place undue pressure on those with limited means, while improving how governments identify and engage informal actors with greater capacity to contribute. In this context, reforms that encourage formalisation can play a central role, such as through simplified tax regimes and effective social protection systems. These measures help tax administrations gradually broaden the tax base, increase revenues, and create conditions that enable employers and workers to participate in the formal economy. Further detail on recent tax statistical publications is contained in Annex B.

4 Core OECD tax instruments: Tax treaties and transfer pricing

Tax treaties and transfer-pricing standards support economic growth and investment by reducing cross-border tax barriers, increasing predictability and certainty for businesses, and ensuring consistent, up-to-date international rules that lower risks, mobilise resources, and facilitate efficient global investment.

Tax treaties

Tax treaties play an important role in fostering economic growth by reducing the tax-related barriers that can discourage cross-border trade and investment. They also create a more predictable fiscal environment for businesses and investors. This stability helps lower the cost of capital, promotes access to technology and expertise and supports mutually beneficial economic ties.

Since it was first published in 1963, the *OECD Model Tax Convention on Income and on Capital* (OECD Model) has been the international benchmark for the negotiation, interpretation and application of tax treaties. Today it forms the basis of a network of more than 3 000 tax treaties globally. By maintaining and regularly updating the OECD Model, the OECD ensures that it continues to provide countries with an agreed basis on which to conclude and then interpret their networks of tax treaties in a consistent way.

In November 2025, the OECD published the latest update to the OECD Model. The update offers enhanced guidance for the interpretation and application of existing tax treaties, keeping pace with developments in the wider economy. The key changes enhance tax certainty and promote growth:

- **Remote working:** Clear guidance on how intermittent cross-border working arrangements are treated under tax treaties. The guidance was developed in response to a request from the business community to address new ways of working, increasingly prevalent in the contemporary business environment, providing greater certainty to business in managing “permanent establishment” tax exposure in other jurisdictions and engaging workforce talent.
- **Natural resources:** A new alternative tax treaty provision, and related commentary, helping resource-rich countries protect their taxing rights over natural resource activities. The provision facilitates greater uniformity of approach to the negotiation and agreement of such provisions and clarity on their interpretation, promoting tax certainty. Such provisions, where agreed in treaties, help resource-endowed countries mobilise their own domestic resources.
- **Other improvements:** Additional refinements to enhance consistency in treaty interpretation and strengthen tax certainty, including in the interaction between tax agreements and tax provisions in trade and investment agreements.

Transfer pricing

The arm's length principle and the *OECD Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations* ("Guidelines"), which were first published in 1995, also support stability, investment and trade. Today, more than 100 OECD/G20 Inclusive Framework jurisdictions – representing around 95% of global GDP – use the arm's length principle and the Guidelines to prevent and resolve transfer pricing disputes.

Through regular updates, the OECD ensures that the Guidelines keep pace with evolving business models, providing jurisdictions with a consistent framework to avoid double taxation and safeguard their tax bases.

Since my last update to you, OECD work on transfer pricing has focused on:

- Updating and modernising the existing guidance on intra-group services, aiming at publishing a consultation document to gather stakeholder input before finalising.
- Supporting jurisdictions' implementation of the simplified and streamlined approach for standardised rules for routine marketing and distribution activities ("[Amount B](#)"), including capacity-building through multilateral trainings – particularly in Africa in collaboration with the African Tax Administration Forum (ATAF) – and the publication of further implementation tools such as the Amount B Pricing FAQs and an update to the Pricing Automation Tool.
- Monitoring the application of the Guidelines under the Transfer Pricing Guideline Reviews in areas where jurisdictions have reported specific challenges to enhance predictability and tax certainty.
- Enhancing transparency and certainty by publishing up-to-date information on the transfer pricing frameworks of 83 Inclusive Framework jurisdictions through the [OECD Transfer Pricing Country Profiles](#).

5

Improving tax administration: Modernisation and certainty

By simplifying tax administration, advancing digital transformation, and strengthening tax-certainty mechanisms that reduce compliance burdens, prevent disputes, and create predictable cross-border tax outcomes, the OECD helps lower business costs and foster the stable, efficient environment needed to support investment and economic growth.

Modernisation

Through work conducted by its Forum on Tax Administration (FTA), the OECD is supporting governments in simplifying tax administration procedures that can be burdensome for tax administrations and taxpayers and increase compliance costs for business.

One of the main projects of the FTA is turning the 2020 Tax Administration 3.0 vision¹⁴ into reality. This vision is to leverage digital transformation, reduce compliance costs for both tax administrations and taxpayers, and to help overcome structural limitations that currently contribute to ongoing challenges with tax gaps. This project fosters collaboration between business, academia and tax administrations.

The FTA also recognises the important role that digital transformation plays in supporting developing countries. To this end, it is delivering a workshop series on digitalisation and digital transformation strategy development specifically aimed at developing countries. In addition, the FTA continues to support the OECD/UNDP Tax Inspectors Without Borders initiative to help ensure that the benefits of digitalisation and digital transformation are shared globally, including increased efficiency, improved revenue mobilisation and reduced burdens.

Tax certainty

As cross-border business and international labour mobility is increasingly commonplace in the 21st century global economy, disputes relating to which jurisdictions can tax what types of income inevitably arise. Maintaining and enhancing tax certainty benefits taxpayers and tax administrations alike and is key in promoting investment, jobs and growth.

The OECD work on tax certainty approaches the topic holistically, focusing on three key areas: simplification, dispute prevention, and dispute resolution. Simplification is the first and most fundamental goal, aiming to streamline rules and their administration to reduce complexity and enhance clarity for both

¹⁴ OECD (2020), *Tax Administration 3.0: The Digital Transformation of Tax Administration*, OECD Publishing, Paris, <https://doi.org/10.1787/ca274cc5-en>.

taxpayers and tax administrations.¹⁵ This includes considering measures like safe harbours and other simplifications, such as the streamlined approach under Amount B.

Dispute prevention is also necessary. This OECD workstream includes tools and programmes designed to tackle potential issues in advance and offer taxpayers proactive avenues for early tax certainty, such as co-operative compliance programmes, co-ordinated risk assessments, bilateral and multilateral Advance Pricing Arrangements (APAs), and joint or co-ordinated audits. When disputes cannot be prevented, the final focus is dispute resolution, which offers efficient, effective, and timely resolution mechanisms, including the Mutual Agreement Procedure (MAP) and arbitration. This integrated approach ensures that the tax certainty agenda not only promotes the prevention and resolution of disputes but also provides a clear and predictable framework of tax rules and administration for taxpayers.

The OECD's FTA recognises the importance of tax certainty for governments, tax administrations and taxpayers, as well as for growth, investment and the economy as a whole. At its November 2025 Plenary meeting,¹⁶ the FTA further highlighted that investing in tax certainty allows jurisdictions to foster a more predictable and transparent environment for taxpayers, underpinned by clearer and simpler tax systems, reducing burdens and delivering broader economic benefits. It also recognised that greater tax certainty also encourages a more co-operative relationship between taxpayers and administrations, supports voluntary compliance, and enables tax administrations to deploy resources more strategically, focusing on complex or higher-risk areas rather than avoidable disputes. Accordingly, the FTA is deepening collaboration on tax certainty by working with the business community and academia in stakeholder fora and pilot projects, with a focus on simplification and dispute prevention. The aim is to advance practical approaches at a tax administration level to prevent disputes, extending advance certainty beyond transfer pricing, and enhancing co-operation with low-capacity jurisdictions.

6 Tax and development activities to support domestic resource mobilisation

By strengthening domestic resource mobilisation, helping developing countries implement stable and predictable international tax rules, including the Global Minimum Tax, and providing hands-on capacity-building through initiatives like Tax Inspectors Without Borders (TIWB), the OECD supports a more efficient and reliable tax environment that attracts investment, fosters genuine economic activity, and underpins sustainable long-term growth.

The OECD's work on tax and development plays a key role in supporting domestic resource mobilisation in developing countries and helping to provide a more stable and certain tax framework that fosters international investment. This is particularly important given that, for many developing countries, taxation provides the ability to move away from foreign aid to support development goals. The work on BEPS is a cornerstone in this area given the proportionately higher reliance on corporate tax revenues in developing countries in comparison with more advanced economies.

Efficient adoption and implementation of international instruments in the area of BEPS, tax treaties, transfer pricing and the broader work on tax policy are beneficial for all, not only developing countries but also their treaty partners or counterparts in the developed world.

Supporting implementation of the Global Minimum Tax

The Global Minimum Tax ensures that developing countries have the first opportunity to apply the minimum tax on profits earned via a QDMTT, which was safeguarded under the January 2026 Side-by-Side agreement. This is a game changer for developing countries who are able to protect their tax bases without harm to their competitiveness or a need for corporate tax competition. Moreover, the minimum tax rules protect substance-based tax incentives, leading to better design and more potential to result in real investment in infrastructure and personnel. The benefits to developing countries are significant, making capacity building and technical assistance in this area a key priority for the OECD's work on tax and development.

The OECD is supporting developing countries to estimate the potential impact they have on revenues and analyse how they interact with domestic tax incentives. Implementation of the Global Minimum Tax needs to be tailored to each country's economic structure and investment profile, given the different natures of economies, level and source of foreign investment and the existing tax incentives. In the first quarter of 2026, the OECD hosted a webinar on the Global Minimum Tax and a workshop on tax incentives. Further workshops on the Global Minimum Tax implementation including economic impact assessment and tax

incentives are already planned for the remainder of the year. The support tools cover a range of modalities, including the development of self-paced learning resources, updated online material and guidance as well as multilateral training, regional dialogues and ultimately bilateral support where appropriate.

Tax Inspectors Without Borders

Tax Inspectors Without Borders (TIWB), a joint initiative of the OECD and the United Nations Development Programme, has to date supported 70 jurisdictions in collecting over USD 2.4 billion in additional taxes. The initiative continues to deliver under its TIWB 2.0 vision launched at the 4th International Conference on Financing for Development (Ffd4) in 2025¹⁷, with notable progress on both new thematic work and South-South co-operation. The first TIWB programme on implementing the Global Minimum Tax in Africa is now underway in Benin in partnership with ATAF, marking a significant expansion into support on complex international tax reforms. TIWB has also operationalised its new “TIWB Graduates” platform, enabling administrations that previously received assistance to serve as experts. The first such programme was launched in March 2025 with Colombia supporting Guatemala, and further pairings are expected in the coming months. The TIWB Governing Board, co-chaired by the OECD Secretary-General and the UNDP Administrator, will meet in the second quarter of 2026 to review progress and approve the 2026–2029 workplan.

Platform for Collaboration on Tax

In March 2026, the Platform for Collaboration on Tax (PCT) – a collaborative effort between the secretariats and staff of the IMF, OECD, UN, and World Bank Group – held its second global conference on tax and development, which brought together more than 200 senior officials and experts representing around 100 countries and various international and regional organisations.

The conference highlighted concrete opportunities for progress: expanding digital tax tools, improved compliance management, better use of data to shape policy, broadening tax bases by evaluating and rationalising tax expenditures, and growing regional collaboration that supports even the smallest and most capacity-constrained tax administrations. Countries are also advancing domestic capacity on international taxation in line with national priorities, which requires stepped up and more co-ordinated international support to allow them to fully reap the benefits of a wide range of existing tools.

At the conclusion of the conference, the principals of the PCT partner organisations reaffirmed their collective commitment to strengthening collaboration on domestic resource mobilisation, supporting countries’ efforts through their distinct mandates, comparative advantages, and expertise. They pledged to strengthen collaboration and engagement with regional tax organisations, regional development banks, and other actors. They agreed that it is critical to maintain country-specific tailoring, leverage stakeholders’ synergies, and strengthen global co-ordination¹⁸.

Other recent initiatives

Other recent initiatives in support of developing countries are further detailed in Annex C, including the OECD’s regional engagement on tax matters, targeted assistance on the simplified approach to applying the arm’s length principle (Amount B), the launch of the OECD Academy’s learning path on taxation, support on taxation of critical raw minerals, and an innovative training programme for Ukrainian judges.

7 Developments in tax transparency

By strengthening global tax transparency, equipping jurisdictions with the information and capacity needed to enforce their own tax rules, and extending standards to emerging areas like crypto-assets, the Global Forum on Transparency and Exchange of Information for Tax Purposes (Global Forum) helps countries protect their revenue bases and exercise their tax sovereignty, creating the stable, rules-based environment that supports sustained economic growth and investment.

Tax transparency on real estate

In July 2023¹⁹ and July 2024²⁰, the OECD transmitted two dedicated reports to the G20 Finance Ministers and Central Bank Governors on tax transparency and real estate. These reports identified both potential short-term and structural options to enhance tax transparency with respect to real estate on a voluntary basis. The short-term approach was completed in 2025 and released as part of the OECD's report in October 2025 to the G20 Finance Ministers and Central Bank Governors,²¹ through the publication of the *Framework for the Automatic Exchange of Readily Available Information on Immovable Property for Tax Purposes*. This new framework builds on the OECD's existing architecture for automatic exchange of information on financial accounts, crypto-assets and digital platform transactions. It seeks to close a long-standing gap in cross-border tax reporting by ensuring that tax administrations can access “readily available” information, including ownership details, property value, transaction history and rental income.

The OECD subsequently welcomed the announcement in December 2025 by 26 countries and jurisdictions of their intention to implement the new framework, with exchanges expected to commence in 2029 or 2030. The OECD continues to work with interested jurisdictions to expand participation, and to support timely and effective implementation of the framework, including through the development of a common XML Schema for the exchanges.

In parallel, the OECD is pursuing technical work on a potential architecture that would enable tax authorities to gain streamlined access to information held in real estate and other ownership registers.

Implementation of tax transparency standards

With 173 member jurisdictions²², including a substantial number of developing countries, the Global Forum on Transparency and Exchange of Information for Tax Purposes (Global Forum) plays an essential part in strengthening international tax transparency and tackling offshore tax evasion. Over the past 15 years, the Global Forum has strengthened transparency and improved countries' ability to enforce their tax rules through consistent application of the internationally agreed standards on transparency and exchange of information for tax purposes. This helps jurisdictions to obtain the information needed to ensure the effectiveness of their tax rules, safeguarding public finances, and supports coherence in the application of the international transparency standards, based on a level playing field for governments and business.

Global Forum Plenary update

The 18th Plenary meeting of the Global Forum took place in New Delhi, India, on 2-4 December 2025 with a keynote address by the Indian Minister of Finance, the Hon. Nirmala Sitharaman. Bringing together over 400 delegates from more than 120 jurisdictions and 12 international bodies, the Global Forum took stock of recent progress in each of its workstreams, discussed emerging challenges and welcomed global progress in the fight against offshore tax evasion, as illustrated in the *2025 Global Forum Annual Report*.²³

This includes progress in its peer review and monitoring work, as well as its tailored capacity building programmes, including regional initiatives to help jurisdictions address their particular needs and challenges. Through these activities, the Global Forum continues to adapt to new issues in the global tax landscape while supporting closer international co-operation.

Extending transparency to the crypto-asset sector

The rapid expansion of the crypto-asset market has created new economic opportunities, as well as heightened risks of tax evasion, particularly where assets are held or traded across borders, out of sight of tax authorities. To address these risks at a multilateral level, rather than through a series of unilateral measure, jurisdictions have worked collectively to expand automatic information exchange (AEOI) to include crypto-assets, building on the approach used for traditional financial accounts under the Common Reporting Standard (CRS). Strong backing by G20 members has been central, prompting co-ordinated work to establish common rules, expectations and implementation timelines.

Seventy-six jurisdictions have now committed to the automatic exchange of information with respect to the crypto-asset sector under the Crypto-Asset Reporting Framework (CARF),²⁴ including the vast majority of jurisdictions where crypto-asset service providers operate, with the first exchanges due to commence in 2027. As shown in the report *Crypto-Asset Reporting Framework: 2025 Monitoring and Implementation Update*,²⁵ progress is being made to put in place the legal, administrative and technical components

²² On 18 March 2026, Nepal became the 173rd member of the Global Forum.

²³ OECD (2025), *Tax Transparency: Delivering a Shared Vision Through International Co-operation – 2025 Global Forum Annual Report*, Global Forum on Transparency and Exchange of Information for Tax Purposes, OECD, Paris, <https://www.oecd.org/content/dam/oecd/en/networks/global-forum-tax-transparency/global-forum-annual-report-2025.pdf>.

²⁴ An update is available at this link: <https://www.oecd.org/content/dam/oecd/en/networks/global-forum-tax-transparency/commitments-carf.pdf>

²⁵ OECD (2025), *Crypto-Asset Reporting Framework: 2025 Monitoring and Implementation Update*, Global Forum on Transparency Exchange of Information for Tax Purposes, OECD, Paris, <https://www.oecd.org/content/dam/oecd/en/networks/global-forum-tax-transparency/crypto-asset-reporting-framework-monitoring-implementation-update-2025.pdf>

required for exchanges to begin, supported by substantial capacity-building activities, model legislation and dedicated training for government officials. Work will continue to ensure comprehensive global participation, reinforce confidentiality and data safeguards, and assist jurisdictions in meeting the agreed milestones for effective implementation.

Further details on the Global Forum's work on peer reviews and capacity building efforts can be found in Annex D.

Annex A. Status of BEPS minimum standards implementation

Action 5 – Harmful tax practices

The Action 5 minimum standard addresses harmful tax practices through peer review, ensuring that preferential tax regimes do not facilitate BEPS or attract profits without real economic activity, and by ensuring transparency through the exchange of information on certain tax rulings.

- **Transparency framework:** Peer review assessments are carried out annually on almost 140 jurisdictions. When the BEPS Package was issued, virtually no information on tax rulings was being exchanged. The latest peer review results were published in December 2025. Based on our most recent data, over 64 000 exchanges of rulings have taken place.
- **Preferential regimes:** The Forum on Harmful Tax Practices (FHTP) has released its latest regime review results in February and has now reviewed 326 regimes, with over 40% of those regimes being abolished. The latest review was the first one done in line with the revised methodology, adopted by the OECD/G20 Inclusive Framework in April 2025, that ensures that the BEPS-impact of a regime is first assessed prior to a legislative review by the FHTP. In 2026, the FHTP will continue its regime reviews in line with the revised methodology.
- **No or only nominal tax jurisdictions:** Finally, the 11 no or nominal tax jurisdictions have been reviewed under Action 5 for the fifth consecutive year and have all introduced economic substance requirements. The next annual monitoring exercise for no or only nominal tax jurisdictions will take place in the second half of 2026.

Action 6 – Tax treaty abuse

The Action 6 minimum standard is focused on strengthening tax treaties with anti-abuse measures to ensure that they do not create opportunities for non-taxation or reduced taxation through tax evasion or avoidance (including through treaty shopping arrangements). Preventing treaty abuse helps to more closely align the allocation of income between countries with the economic activity that generates that income. Implementation of the Action 6 minimum standard in tax treaties is at an advanced stage primarily through the use of the Multilateral Convention to Implement Tax Treaty Related Measures to Prevent Base Erosion and Profit Shifting (BEPS MLI), with most newly concluded tax treaties now also including provisions implementing the Action 6 minimum standard.

- To date, the BEPS MLI covers 107 jurisdictions (of which 90 have already ratified) and over 2 000 bilateral tax treaties.
- The BEPS MLI has already effectively modified over 1 600 of those bilateral tax treaties (with approximately 400 additional treaties to be effectively modified once all Signatories ratify); most jurisdictions that have signed the BEPS MLI have listed all, or almost all, of their tax treaties to be covered.
- This coverage continues to expand as Signatories ratify and new Signatories join the BEPS MLI.

- Overall, at this stage more than 90% of the tax treaties concluded between members of the Inclusive Framework are either compliant with the minimum standard, subject to a complying instrument, or subject to steps taken by at least one treaty partner to implement the minimum standard.

Action 13 – Country-by-Country reporting

Action 13 requires all large multinationals to prepare a Country-by-Country (CbC) report with aggregate data on the global allocation of income, profit, taxes paid and economic activity in all tax jurisdictions in which it operates. The CbC report is then shared with qualifying tax administrations in these jurisdictions, for use in high level transfer pricing and BEPS risk assessments.

As a result of Action 13:

- over 120 Inclusive Framework members have introduced legislation to require the filing of a CbC report, covering substantially all MNEs above the EUR 750 million threshold;
- 106 Inclusive Framework members are automatically exchanging CbC reports filed in their jurisdiction with other members that meet the conditions under the standard; and
- 84 Inclusive Framework members have completed all of the building blocks to enable them to be in a position to receive CbC reports on exchange.

The eighth annual peer review report of Action 13, which considers all aspects of implementation of the CbC Reporting minimum standard by 142 Inclusive Framework members as of 31 March 2025, was released in September 2025. This shows that, where a jurisdiction has legislation in place, the implementation of CbC Reporting has been largely consistent with the Action 13 minimum standard. In particular, since the previous peer review report was released in 2024, 16 jurisdictions have taken steps which followed one or more recommendations for improvements to their domestic legal and administrative framework, their exchange of information framework, or their controls over the appropriate use of CbC reports, enabling these recommendations to be removed. The ninth annual peer review is currently underway and the results are expected to be released in September 2026.

The OECD has provided extensive support, including targeted multilateral workshops on technical issues, to developing countries in their implementation of the Action 13 minimum standard. In total, 28 developing countries now have CbC reporting fully in place (plus a further two jurisdictions that were developing countries at the time they implemented CbC reporting, but which have since been re-categorised as high-income jurisdictions), including 13 that completed the steps to receive CbC reports since the *G20/OECD Roadmap on Developing Countries and International Taxation Update* was released in July 2023. Work is also underway to make sure that the information in CbC reports exchanged under Action 13 can be put to effective use, including through workshops, training events, risk assessment software, handbooks and guidance.

Action 14 – Mutual Agreement Procedure (MAP)

The Action 14 minimum standard aims to ensure that dispute resolution mechanisms in tax treaties operate effectively. This is achieved through a peer review process designed to assess how jurisdictions comply with the standard.

Under this framework, Inclusive Framework members are assessed based on their ability to prevent disputes, the availability and access to MAP, the resolution of MAP cases, and the implementation of MAP agreements. Beyond assessment, the peer review process serves as an opportunity to provide jurisdictions with recommendations, guidance, and ongoing support to help them meet the standard. Peer reviews began in 2016, initially focusing on jurisdictions with significant MAP experience. Following the completion

of these reviews in 2022 with each jurisdiction being reviewed in two stages, these jurisdictions are now subject to a full peer review every four years to monitor their progress and are encouraged to use the feedback to further refine their MAP policies and practices. Since 2022, jurisdictions with limited MAP experience, most of them not having been peer reviewed before, have been subject to a simplified peer review process, which helps them develop policies, share information, and build capacity for future MAP cases, with support from the FTA MAP Forum.

Key outcomes of Action 14:

- 82 jurisdictions have completed two stages of peer review. A full peer review process is currently underway to assess the progress achieved by 55 jurisdictions with meaningful MAP experience in meeting the Action 14 minimum standard. Reviews have been started for 44 of these jurisdictions. Of these, reviews for 18 have been completed, with final reports already published for four and expected soon for the remaining 12.
- 77 jurisdictions with limited or no MAP experience have undergone or are undergoing a simplified peer review process. Reports for 60 of these jurisdictions have already been published and the remaining 17 jurisdictions are undergoing peer review. The simplified peer review process aims to help these jurisdictions to set up a more robust MAP programme for a possible increase in cases in the future.

In addition, jurisdictions report statistics related to their tax certainty obligations under Action 14. The ongoing collection of data provides a clearer picture of implementation and ensures transparency through published information on MAP (e.g. MAP guidance or MAP profiles, all available through the annual Consolidated Information on MAP). Starting in 2024, jurisdictions have also begun reporting statistics on Advance Pricing Arrangements (APAs), offering stakeholders deeper insights into the functioning of dispute prevention mechanisms within each jurisdiction.

Annex B. Tax policy statistical updates

Published in December 2025, *Revenue Statistics 2025: Disentangling Personal Income Tax Revenue in OECD Countries*²⁶ showed that the average tax-to-GDP ratio across OECD countries reached 34.1% of GDP in 2024, a year-on-year increase of 0.3 percentage points (p.p.) following two consecutive years of decline. Between 2023 and 2024, the tax-to-GDP ratio increased in 22 of the 36 countries with data for 2024, declined in 13 and was unchanged in one. The largest increases in 2024 were observed in Latvia (2.4 p.p.) and Slovenia (1.9 p.p.), primarily driven by higher social security contributions; Colombia recorded the largest decrease (-2.2 p.p.).

For the first time, *Revenue Statistics* included a special feature that breaks down personal income tax (PIT) revenue according to different sources of individual income for 29 countries. It showed that, while employed-labour income was the main source of PIT revenue in all of these countries in 2023, in most countries the share of employed-labour income in overall PIT revenue declined between 2011 and 2023 while the shares of income from capital and from self-employment increased.

The tenth edition of *Revenue Statistics in Africa*²⁷, also published in December 2025, showed that tax revenues rose across African countries for the third consecutive year in 2023 driven by higher CIT revenues. The report, which is published jointly by the OECD, the African Union Commission and the African Tax Administration Forum, showed how domestic resource mobilisation has evolved across 38 countries, including The Gambia and Liberia for the first time. The average tax-to-GDP ratio for these countries reached 16.1% in 2023, an increase of 0.5 percentage points (p.p.) from the previous year, with tax revenues increasing as a share of GDP in 24 countries, decreasing in 13 and remaining unchanged in one. Over a longer timeframe, Africa's average tax-to-GDP ratio rose by 1.4 p.p. between 2013 and 2023, although the ratio in 2023 remained below the averages for Asia and the Pacific (19.6%), Latin America and the Caribbean (LAC, 21.3%) and OECD countries (33.9%).

The OECD continues to track countries' use of taxes on energy use, carbon taxes and emissions trading systems. The database covers 79 countries accounting for approximately 80% of global energy use. Recent developments in this policy area have included a tendency to reduce excise taxes on energy consumption in response to pre-tax energy price hikes and broader deployment of emissions trading systems. New emissions trading systems tend to blend a range of policy objectives, including competitiveness, affordability and energy security, in addition to pricing emissions.

²⁶ OECD (2025), *Revenue Statistics 2025: Disentangling Personal Income Tax Revenue in OECD Countries*, OECD Publishing, Paris, <https://doi.org/10.1787/3a264267-en>.

²⁷ OECD/AUC/ATAF (2025), *Revenue Statistics in Africa 2025: Commonalities and Specificities across African Revenue Classifications*, OECD Publishing, Paris, <https://doi.org/10.1787/8d3bf3af-en>.

Annex C. Other tax and development activities

Regional engagement on international tax developments

The OECD engages with developing countries on a regional basis to facilitate dialogue on international tax developments and promote the exchange of experiences among tax officials. These meetings bring together regional partners and focus on progress with BEPS implementation, the Global Minimum Tax, and a range of key emerging issues, including new OECD/G20 Inclusive Framework workstreams on global mobility of workers, and tax, inequality and growth. Recent events include a virtual consultation for Asia and the Pacific in November 2025, a regional conference for French-speaking Countries in Libreville, Gabon in February 2026, and a virtual regional conference for Latin America in March 2026.

The Caribbean Tax Outreach Programme²⁸ is a new initiative led by development partners and aims to address regional tax priorities, which fuel regional economic growth and attract investment. During the first half of 2026, virtual events are being held to encourage experience sharing, peer-to-peer learning and facilitate co-ordination between development partners.

Amount B workshops for Francophone African countries

Amount B provides a simplified approach to applying the arm's length principle, taking into account the needs of low-capacity jurisdictions. It is expected to reduce disputes and compliance costs while enhancing tax certainty and jurisdictions' investment attractiveness and economic growth. A series of interactive workshops on Amount B for Francophone African countries was delivered in French in February/March 2026, in collaboration with ATAF. The programme discussed Amount B's objectives, key features, and its potential impact on domestic resource mobilisation, while providing detailed technical guidance on its scope, pricing framework, and the practical use of its pricing tool. Tailored to the African context with region-specific case studies and business practices, the workshops facilitated experience sharing among more than 130 participants from 17 countries, including six jurisdictions that are not members of the Inclusive Framework.

Launch of the OECD Academy – Learning path on taxation

The OECD has launched the taxation learning path within the OECD Academy. The OECD Academy brings together all OECD self-paced taxation courses in a single, modern and user-friendly platform, making it easier for government officials to access practical learning and build skills at their own pace.

Through the Academy, the OECD continues to support tax administrations worldwide by offering high-quality training covering a wide range of topics in international taxation. The OECD Academy offers:

- A single platform for OECD self-paced tax courses;
- Clear learning path and improved navigation;
- Multilingual content and certificates upon completion; and
- Free access for government officials.

²⁸ [Caribbean Tax Outreach Programme](#)

International tax capacity building for Ukrainian administrative court judges

On 6 March 2026, the OECD concluded Phase II of its International Tax Capacity-Building Programme for Ukrainian Administrative Court Judges. Launched in 2022 at the request of Ukrainian judicial and governmental authorities, the programme has evolved from conceptual training (Phase I) to hands-on judicial dialogue and experience sharing (Phase II). The initiative has contributed to strengthening tax certainty and the rule of law in areas including tax treaties, transfer pricing and VAT.

Building on this experience, access to the OECD Academy has been extended to members of the judiciary worldwide. Previously reserved for tax officials, the Academy now provides judges with free access to nearly 100 e-learning modules on international taxation, available in English, French, Spanish and Arabic. The OECD will continue to promote international judicial co-operation and explore further capacity-building initiatives in Ukraine and other partner jurisdictions.

Taxation of critical raw minerals

The OECD and the International Institute for Sustainable Development (IISD) signed a Memorandum of Understanding in March 2026 to strengthen co-operation on domestic resource mobilisation associated with the mining sector, particularly critical raw minerals. Through the transversal initiative on critical minerals for sustainable development work, the OECD has contributed to the development of three publications associated with critical raw minerals, in particular, one publication focuses on the taxation of critical minerals in Central Asia with a mission to Kazakhstan in March 2026 to showcase the recommendations. Furthermore, the OECD launched an e-learning module on the mining value chain in March in consultation with Business at OECD to assist developing countries to understand the various tax risks that occur along it.

Annex D. Progress on exchange of tax information peer reviews and capacity building

Progress on Exchange of Information on Request (EOIR)

In total, 129 jurisdictions have been rated in the second round of EOIR peer reviews since 2016 and a further 25 had their legal and regulatory framework reviewed, pending the review of their effectiveness in practice. To date, 90% of them have been rated either “Compliant” or “Largely Compliant”, demonstrating the maturity of the EOIR standard. In January 2026,²⁹ the Global Forum issued five new peer review reports assessing EOIR. Antigua and Barbuda and the Seychelles, both having undergone combined reviews, were rated “Largely Compliant” after making notable progress in strengthening their legal frameworks and practical implementation. Benin, Cabo Verde and Palau went through Phase 1 reviews only; their legal frameworks are broadly in place, though each has specific gaps to address before their Phase 2 assessments begin by 2028.

Rolling out in 2025, the new enhanced monitoring process reinforces actions to address over 1 600 recommendations issued in the second round of EOIR reviews, and progress is being closely monitored. The first *Enhanced Monitoring Report on the Implementation of the Standard on Transparency and Exchange of Information on Request 2025*³⁰ shows that across the 25 jurisdictions covered so far, 83% of the recommendations previously issued are considered (provisionally) addressed (29%) or are in the process of being addressed (54%), with material improvement noted for almost all recommendations. Notwithstanding that, many jurisdictions continue facing difficulties in the implementation of beneficial ownership requirements. A strength of the monitoring process is its use of peer input. Peers are uniquely placed to know the effectiveness of exchanges of information with a jurisdiction and the peer input highlighted issues, with related recommendations subsequently being issued.

Progress on Automatic Exchange of Information on Financial Accounts (AEOI)

The Global Forum continues to monitor and review the implementation of AEOI on financial accounts under the CRS. According to the 2025 update,³¹ 97% of the 118 assessed jurisdictions have domestic and international legal frameworks that largely meet the CRS requirements. Of the 108 jurisdictions assessed under the initial round of effectiveness reviews, 68 were considered “On Track” with their implementation, 19 “Partially Compliant”, and 21 “Non-Compliant”. The second round of effectiveness reviews, consisting of an in-depth assessment of the effectiveness of jurisdictions’ frameworks for monitoring and enforcing

²⁹ OECD (2026), *Global Forum on Transparency and Exchange of Information for Tax Purposes: Cabo Verde 2026 (Second Round, Phase 1): Peer Review Report on the Exchange of Information on Request*, Global Forum on Transparency and Exchange of Information for Tax Purposes, OECD Publishing, Paris, <https://doi.org/10.1787/2bbd378b-en>.

³⁰ OECD (2025), *Enhanced Monitoring Report on the Implementation of the Standard on Transparency and Exchange of Information on Request 2025*, OECD Publishing, Paris, <https://doi.org/10.1787/4db1a02b-en>.

³¹ OECD (2025), *Peer Review of the Automatic Exchange of Financial Account Information 2025 Update*, OECD Publishing, Paris, <https://doi.org/10.1787/bbf150e4-en>.

compliance by Financial Institutions as well as of the international exchanges, is currently underway; the findings in respect of the almost 100 jurisdictions that began CRS exchanges in 2017 or 2018 are expected to be published at the end of 2026.

Progress has also been made by relevant Global Forum members to implement the amended CRS in time to commence exchanges under the amended CRS by 2027, with appropriate transitional arrangements for jurisdictions where needed.

Confidentiality and data safeguards

Following the completion of nearly 120 confidentiality and data safeguards assessments between 2019 and 2025, and in light of evolving cyber-security risks, a third round of assessments using an enhanced methodology was launched in 2025. This third round introduces a new annual monitoring mechanism. The renewed peer review and monitoring work will continue alongside capacity-building activities (see below) to support jurisdictions in establishing and maintaining effective confidentiality and data safeguards frameworks.

Work on risks to exchange of information standards

The Global Forum has developed a forward-looking framework to identify, assess and monitor risks to the effective implementation of tax transparency standards, culminating in the first biennial update of the Risk Register, which now comprises 112 risks. This work highlights how rapid technological change is reshaping the risk landscape: several high-level risks have been placed under continuous review, including vulnerabilities linked to crypto-assets, the growing use of artificial intelligence and new technologies – each of which introduces new avenues for tax evasion, data-security breaches and operational disruption.

Capacity building and outreach activities

The Global Forum's 2026 *Strengthening Capacities to Advance Tax Transparency and Mobilise Domestic Resources*³² shows a clear improvement in developing countries' ability to use tax transparency to exercise their tax sovereignty, by obtaining the information required to enforce their tax systems and strengthen domestic resource mobilisation. In 2024, developing countries accounted for 70% of the nearly EUR 4 billion in additional revenues reported worldwide. Their use of exchange of information tools continues to expand: in 2024 they sent 4 659 exchange-of-information requests (a 43% increase compared to 2023) and participating jurisdictions received information on 53 million financial accounts, worth EUR 2.7 trillion, from their automatic exchange partners – more than six times the value of the data they provided.

This progress reflects sustained political engagement and extensive capacity-building support. In 2025, the Global Forum Secretariat delivered bilateral assistance to 111 jurisdictions, including intensive support to 88 developing countries, while building capacities of more than 20 000 officials and assisting members to advance key reforms such as beneficial ownership frameworks, information security management and the implementation of the CRS and the CARF. Developing countries also continued to strengthen their role in the Global Forum's governance and technical work, providing 34% of peer inputs and serving as assessors across all review processes.

OECD Secretary-General Tax Report to G20 Finance Ministers and Central Bank Governors

G20 United States, April 2026

This report sets out recent developments in international tax co-operation, including the OECD's support of G20 priorities such as the implementation of the BEPS minimum standards, the global minimum tax framework, and tax transparency. It was prepared by the OECD ahead of the First G20 Finance Ministers and Central Bank Governors' Meeting under the United States G20 Presidency, held on 16 April in Washington, D.C, United States.
